EDUCATION

National Institute of Technology, Durgapur

Bachelor of Technology in Computer Science and Engineering

Nov 2022 – May 2026

CGPA: 8.54/10.0

TECHNICAL SKILLS

Languages	Java, C/C++, Python, C#, JavaScript, TypeScript, SQL, HTML/CSS, Dart
Database & Systems	PostgreSQL, Cassandra, MongoDB, Redis, MySQL, Apache Spark, System Design
Cloud & DevOps	AWS/Azure (ECS, ALB, SNS, SQS, CloudWatch, S3), Docker, CI/CD, Microservices
Frameworks	React.js, Next.js, FastAPI, Django, Express.js, Flutter, Tailwind
AI/ML & Agentic	LangChain, RAG, Multi-Agent Systems, Model Context Protocol, Hugging Face
Tools	Git/GitHub, Linux, Pinecone, Terraform, Jenkins, Ansible, Playwright, Vagrant

PROFESSIONAL EXPERIENCE

Wells Fargo

Software Engineer Intern | Consumer Technology

Jan 2026 – Present

Hyderabad

- Designed and implemented a **GenAI-driven self-healing regression platform** automating complex testing workflows for the **Early Resolution** enterprise vendor application, ensuring highly reliable system interoperability and data exchange.
- Leveraged **LangChain deep agents** and integrated powerful **Model Context Protocol (MCP)** servers with **Playwright** to intelligently detect, diagnose, and repair failing test cases in real-time, seamlessly bridging internal frameworks with third-party UI components to significantly accelerate deployment cycles.

Userology

Software Engineer Intern | Node.js, Next.js, AWS, LiveKit, Python, RAG

May 2025 – Dec 2025

Remote

- Architected and deployed production-grade AWS **ECS microservices** and robust data pipelines with ALB and autoscaling, achieving **99.9% uptime** while handling over **10,000 daily requests** with sub-200ms p95 latency.
- Integrated **LiveKit WebRTC** infrastructure to facilitate seamless third-party application interactions, supporting **concurrent user sessions** with a custom distributed gRPC layer for scalable media processing workflows.
- Led a critical framework migration affecting **4+ microservices** and managed advanced prompt orchestration through Portkey, establishing secure agentic data exchange solutions within an aggressive **8-week timeline** with **zero downtime**.

Capricon Technology

Full-Stack Developer Intern | Flutter, React, Node.js, MongoDB, GraphQL, Java

Aug 2023 – Aug 2024

Remote

- Developed a high-performance, AI-powered **data pipeline** for speech-to-text transcription with automated cron workflows, processing over **2,000 medical reports monthly** and reducing preparation time by **40%** while maintaining **95%+ accuracy**.
- Built a comprehensive real-time trading analytics dashboard integrating **5+ third-party financial APIs**, ensuring highly reliable data interoperability and robust error handling to achieve **99.5% reliability**.

LEADERSHIP & ACHIEVEMENTS

- **Amazon ML Challenge 2025:** Achieved **Top 10 ranking out of 86,000+ registrations** — architected and trained **336-million-parameter** multimodal system combining text and vision modalities with a production-ready inference pipeline for real-world e-commerce pricing scenarios.
- **HackOn with Amazon Season 5, 2025:** Secured **Top 75 out of 52,000+ participants** — built scalable distributed architecture for fraud detection in e-commerce marketplace.
- **General Secretary, GNU/Linux Users Group (GLUG), NIT Durgapur:** Led technical infrastructure management for campus-wide systems, mentored over **200 students** in Linux and open-source software development, successfully organized AAROHAN technical festival attracting **30,000+ participants**.
- **Head of Web Development, Entrepreneurship Development Cell (EDC):** Delivered scalable event management solutions for annual E-SUMMIT conference serving **30,000+ attendees**, managing secure data integrations for registration workflows and payment processing.
- **Competitive Programming Excellence:** Achieved Knight status on LeetCode (1800+ rating), Specialist on Codeforces (1475 rating), 4-star rating on CodeChef (1800+), secured **Global Rank 1939 in Meta Hacker Cup**, and solved over **500 data structures and algorithms problems**.
- **Smart India Hackathon Semifinalist:** Designed and prototyped an innovative paperless scholarship verification system with DigiLocker API integration, streamlining secure document verification for over **10,000 applications**.

PROJECTS

Official Placement Portal, NIT Durgapur | FastAPI, Next.js, Redis, PostgreSQL [Live Production](#)

- Designed and developed a comprehensive recruitment automation system serving over **10,000 internal users**, maintaining **99.8% uptime** with consistent **sub-100ms API response times**.
- Implemented automated compliance workflows with a Redis caching layer that reduced database load by **70%**, alongside secure Role-Based Access Control (RBAC) and comprehensive monitoring infrastructure.

Research.AI — Multi-Agent Paper Summarization System | FastAPI, React, RAG, FAISS [GitHub Repository](#)

- Built a sophisticated **RAG-powered** research platform utilizing advanced vector embeddings and semantic search to achieve **90%+ retrieval accuracy** on complex domain-specific queries.
- Implemented an innovative **multi-agent system architecture** showcasing complex agentic interoperability, generating conversational summaries via a real-time streaming user interface with robust context retention.

Smart Product Pricing (Amazon ML Challenge — Top 10 out of 86,000+ Participants) | PyTorch, Transformers, CNNs

- Designed and trained a sophisticated **336-million-parameter multimodal deep learning model** combining a transformer-based text encoder and CNN image backbone with a novel late-gated fusion architecture, processing over **75,000 product entries** to achieve a **SMAPE metric below 5%**.

GNCS (GluG Network Compute System) | Python, Django, PostgreSQL, Ansible, Vagrant [Private Deployment](#)

- Engineered a full-scale **infrastructure automation platform** managing **300+ virtual machines**, driving enterprise-grade deployment strategies. Implemented dynamic VM scheduling, automated provisioning via cron triggers, and real-time telemetry dashboards for comprehensive system visibility.

Real Stories: Multi-Agent RL for Storytelling | Python, PyTorch, PPO, Transformers [GitHub Repository](#)

- Developed a **multi-agent reinforcement learning system** using the PPO algorithm for adaptive AI storytelling, incorporating human feedback loops for highly personalized narrative generation.
- Built a comprehensive evaluation framework integrating **4 distinct metrics** and automated visualization tools to securely monitor AI data pipelines and performance.
